Mavick

The AI operating system for the textile industry.

Give every department its own AI agent.

Mavick

AI agents for textile factory operations.

Build your factory's departments in Mavick. Each one gets its own AI agent that speaks that department's language, reads only that department's data, and can take action like creating files for day-to-day operations.

Vision

Every textile factory runs on an operating layer, not on spreadsheets, chat groups, or the memory of whoever has been there longest.

Mission

Give every textile department an AI agent that knows its craft, reads its live data, shows its evidence, and takes approved actions.
